

# **Working Prototype Known Problems Report**

**Next-Beer**

**11/23/16**

## **List of functions not working correctly:**

1. User Story 19 sprint 3: As a user, I'd like to be able to scan a QR code to let the app know what beers are available for me to drink
2. Contact email on landing page of website does not function
3. User story 8 from sprint 2: As a user, I'd like to see my beer preferences visualized on the mobile app
  - a. Beer preference visualization will only work if users log back in AFTER either changing their user preferences or making a new account for mobile.
  - b. Changing between tabs will end up duplicating the graph's x axis values.
  - c. These all seem to be a problem with code hierarchy and which function is getting called first and functions getting called multiple times or functions getting called too quickly.
